Build Your Own Wood-Fired Pizza Oven

Wed, 07/20/2011 - 05:13 -- Roger Doiron

There are some people who dream about fame and fortune and others who dream about the perfect pizza. I tend to be part of the latter crowd and have often dreamed about having my own wood-fired pizza oven in the backyard. The problem is that you need a fortune (upwards of \$2000) if you want to buy one pre-assembled.

The other option is to build your own as the [flickr user](#) [1] above has so beautifully done and documented. Although I'm no handyman, I'm thinking that I could eventually pull something like this off with practice (i.e. 5 attempts or less).

For those of you ready to dive in already, you can find [step-by-step instructions here as well as a tools and materials list](#) [2].
