

Making Magic.

Tue, 11/22/2011 - 07:24 -- julieta

Last week, I picked up a novel called *The Magicians* by Lev Grossman, thinking that this might be a fun read for our girlie. As I found it in the teen section, however, I decided to read it first. (Confession: I love kids books, teen books, ANY books.)

Whew. Thank goodness I checked it out! Within the first two pages, the author introduced topics including virginity (or lack thereof), masturbation, as well as some... flavorful... language.

Now, I'm not a book burner. In fact, nothing incites me more than extremist groups who try to ban Harry Potter from school libraries. But, I do worry about age appropriateness, particularly when a 10-year-old reads books with teen protagonists.

Yep. Not passing along this book to my daughter just yet.

Don't get me wrong?it's a good read so far. It's just too mature for my Kiki. Although she loves books with magic and fantasy, this one has a bit too much harsh reality that I don't want her to experience ever too soon.

Still, there is something magical about pushing the limits. As a child, I definitely read books that were too advanced for my age. And boy, do I remember the trouble we got in for passing around my friend Diane's dog-eared copy of *Forever*. I wasn't typically a rule breaker, but on the few occasions that I did?it was, well, thrilling.

And empowering.

Maybe even a little magical.

Breaking the rules and pushing limits is still a bit of a rush?but now, my rebelliousness lives in the garden.

(Wow, writing that aged me about 20 years, didn't it?)

I admit?I am very behind on my gardening chores this fall. In fact, I just planted our fall vegetable garden?two weeks ago. Even by South Carolina, zone 7b standards...that's late. It's almost futile.

Unless you push the limits and disobey certain rules.

Recently, I've become enamored with the concept of season extension. What can I do, with our little piece of earth, to feed my family throughout the winter? How can I keep my fall garden producing? Can I fight the elements and extend the harvest, even if the 'experts' disagree? Will my garlic crop fail if I don't get it planted by Halloween? Will my lettuce wither and melt if I plant it in late October instead of mid-September? Or can I thumb my nose at conventional gardening wisdom and produce a bumper crop of brassicas to harvest in January?

The key, I think, is to break some of the rules...but still adhere to some of the tried and true methods for season extension.

To see how we're extending our harvest, please visit <http://growingdays.blogspot.com> [1]

Happy gardening!

XO ~

Julie
