## S.O.S.!

Sat, 03/31/2012 - 09:35 -- BrotherJoseph

Help!

I am in Belize, Central America, and these things are beginning to bug me!

I have tried neem and my homemade pepper spray, but these insects keep coming back.

Anyone have any idea what they are?

I think they are a bee or wasp, and are probably pollinating at the same time they are nibbling my okra and bean flowers. They even nibble the beans and okra, causing damage!

I don't want to kill them, only discourage them without hurting the plant. My latest concoction seems to be a bit too strong for the bean flowers.
