## Ritak256 question

Fri, 03/08/2013 - 09:01 -- Ritak256

Question:

In Kenya, I used to make Sukuma Wiki, using kale. When I make it here in MA, the kale available doesn't look, nor tastes like, what I ate in Kenya. What type of kale is grown in Kenya, and can I get it (or the seeds) here? Will it grow in the MA climate (zone 6)? Please advise, and thanks in advance for your help.

Question Details (optional):

The kale I ate in Kenya was not curly leaf, rather, it was evenly smooth. It was a dark green and had long stems. I lived there from 1987-1990, so my memory is not as good as it was. If you could give me the latin name for the kale I am looking for, I can continue my search online. Thanks again!
