How to Build Your Own T-Pea Tower

Tue, 04/16/2013 - 15:14 -- Roger Doiron

This bamboo plant support is ideal for climbing peas and beans, and it's a snap to erect. For climbing plants, such as garden peas and green beans, you can't beat this teepee-style support for simplicity and portability (the bamboo poles make it relatively lightweight). To secure the tower in place, all you need to do is drive a few spikes into the ground and wire or tie the bottom of the poles to them.

Materials

- Lumber
- Ten 1/2" bamboo poles (6' long)
- Supplies
- 1/4"-thick rope or wire
- Strong rubber band
- Ten gutter spikes
- Tools
- Utility knife
- Wire cutter
- Hammer
